

QUALITÄT FROM GERMANY

Assembly production of rotary axis with torque drive for tool grinding machines and machining centers

As known producer of NC-dividing centers HOFMANN Mess- und Teiltechnik developed and established the product segment assembly production of rotary axis with torque drive.

On behalf of renowned machine manufacturers are rotary axes with torque drive ready to install and delivered according to customer specifications. Manufacturing of arts required is carried out exclusively in-house, thereby quality and readiness for delivery are guaranteed. Definite execution of rotary axis is only the construction of the machine manufacturer.

Advantages of our assembly production:

- delivery from one source
- only one contact for all interests
- rotary axis ready to be installed including electric axes connections
- Service for each module by HOFMANN
- Saving costs by disappearance of buying processes several suppliers
- high-quality execution through years of experience in production of assemblies and rotary axis with its own manufacturing and construction

assembly production of HOFMANN offers extensive benefits for the following User:

- manufacturer of tool grinding machinery
- manufacturer of machining centers
- manufacturer of special machines
- Machine manufacturer without own manufacturing of components

HOFMANN Mess- und Teiltechnik is a frequent partner of major manufacturers of machine tools and machining centers for metalworking. The company has a more than 60 years of experience in measurement and dividing technology and now belongs to renowned Müller Group with 100 employees.

All major component of the HOFMANN-products around pitches and rotational movements are in modern production manufactured at the company headquarters in Baden-Württemberg Pliezhausen.

HOFMANN Mess- und Teiltechnik offers its customers exactly on their requirements towards coordinated solutions that not using standard solutions from other manufacturers are realized. In the foreground is always close dialogue with the customers to give them an optimal provide solution for the respective application.
